

## METHODE POST AND METHODE GET ARE BOTH SUPORTED

```
<meta http-equiv="Content-Type" content="text/html; charset=UTF-8" />
<%
  ServerRoot = "http://www.moursel.com/mrWebAPISend.aspx" ' never change this variable
  SUsername = "yourusername" ..... ' your username
  Spassword = "yourpassword" ..... ' your password
  SenderID = "your sender id" ..... ' OPTIONAL , if you have more than sender id.
  MessToSent = "write your message here" ..... ' the message to send .
  mobnum = "961-3xxxxxx" ..... ' Number(s) .
  redpage = "http://www.xxxxxx.com/pagename.asp" ' the redirect page
  mt = "1" ..... ' message type (1:unicode , 0:latin)  %>
```

### Information -----

- Never change the ServerRoot
- You can specify a SenderID if you have more than one.
- IF SenderID is not specified (SenderID="") then it will be your default SenderID.
- Your text message limitation is 159 characters per latin sms and 70 characters per unicode sms, you can get over the limit in your text message but this will cost you another message.
- For only one number use the format: 961-3xxxxxx
- For many numbers use the format: 961-3xxxxxx,961-70zzzzzz,961-3ccccc,...
- The redirect page - the page on your website where the user will be redirected after Sending SMS is completed

### Notice -----

After contacting moursel to send sms , an error can occur during the operation.  
 You will be redirected to your requested redirect page with an error variable defined by "err".  
[http://www.xxxxxx.com?err=\[error number\]](http://www.xxxxxx.com?err=[error number])

\*\*\*\*\*

#### Error numbers:

- 1 = invalid username or password
- 2 = user not active
- 3 = not enough balance
- 4 = server error.
- 5 = Number not Valid
- 6 = Operator not covered yet
- 7 = Wrong Sender ID
